SUMMARY

Results-driven Backend & Automation Engineer with 2+ years of experience in building high-performance, scalable systems with Python and Django. Proven track record of optimizing system performance by slashing data loading times by 85% through advanced AsyncIO pipelines, improving data quality by 40% using Google Gemini API, and boosting database query efficiency by 2-3x. A problem-solver dedicated to delivering measurable business impact through technical excellence.

WORK EXPERIENCE

Freelance - Tashkent

Backend & Automation Developer | June 2025 – Present

- Architected and implemented async pipeline architecture using Python 3.x, Django 4.x, and AsyncIO, reducing manual data loading time by 85% and enabling automated processing of 10,000+ products daily
- Spearheaded the development of intelligent product merging system with phash-based duplicate detection and Google Gemini API integration, improving data quality by 40% and reducing duplicate entries by 80%
- Implemented real-time tracking system using Django Channels and WebSocket (Redis-backed), enabling live monitoring of production sessions, material consumption, and KPI calculations with sub-second latency, reducing operator response time by 60%
- Optimized database performance by implementing `select_related()` and `prefetch_related()` patterns across 25+ ViewSets, reducing N+1 query issues and improving API response times by 2-3x for complex production reports and order tracking
- Integrated Bitrix24 CRM via REST API and webhook handlers, automating employee data synchronization, department management, and production order imports, reducing manual data entry time by 50% and ensuring data consistency across systems
- Implemented WebSocket consumers for real-time dashboard updates, enabling operators to track material consumption, product output, and KPI earnings in real-time, improving operational visibility and decision-making speed by 40%
- Built async backend architecture using Python 3.10+ and PostgreSQL, supporting 10,000+ concurrent users with 99.9% uptime and sub-second response times
- Implemented role-based access control system with 3-tier hierarchy (Superadmin/Admin/User), managing 10+ admins and automating workload distribution across team members
- Created automated receipt verification workflow with file upload validation, processing 500+ receipts daily and reducing admin response time from hours to minutes

Cortex Group - Tashkent

Software Developer | September 2024 - May 2025

- Developed robust browser automation solutions using Selenium, which automated repetitive data entry workflows and reduced manual work time by 10 hours per week.
- Engineered scalable backend systems for multiple web platforms using Python, supporting over 5000 active users and maintaining 99.9% service uptime.
- Designed and optimized database schemas in PostgreSQL and MongoDB, which improved data retrieval query times by 25% and ensured high data integrity.
- Integrated browser automation tasks with backend services, creating a seamless data pipeline that reduced manual processing errors by 90%

EDUCATION & COURSES

- **Tashkent University of Information Technologies, Fergana Branch**.....2020 – 2024
BSc in Computer Engineering
- **Codial Training Center (Fergana)**.....2021 – 2022
Python Backend Development
- **Stepik.org (Online Platform)**.....2024 – 2025
[Test automation using Selenium and Python](#) - Selenium's Certificate([Stepik.org](#))

SKILLS AND INSTRUMENTS

Python, Django, DRF, FastAPI, PostgreSQL, SQLite, MongoDB, REST, Selenium, Playwright, Pytest, Unittest, Browser Automation Studio, Git, GitHub, GitLab, AsyncIO, Background Jobs, SQLAlchemy, Alembic, Django Channels, Pydantic, Redis, AsyncPG, Bitrix24 API / CRM Integration, Websocket

LANGUAGES

Uzbek – Native | English – B1 | Russian – A1
